

new

**A classic with growth potential** All the standard sizes of the Haller rectangular tables can now be seamlessly adjusted from 68 to 86 cm (27 to 34 inches) by means of a patented height adjustment mechanism. The table height is adjusted by hand, using a crank, which increases or decreases the height of the four table legs simultaneously and is installed in an easily accessible location on one of the table legs.

**USM Haller Table**

**Height-adjustability**
