Wilkhahn

Aline skid-base chair.

230 range

Minimal materials.
Maximum transparency.
Simple to use.

Wilkhahn's Aline range, designed by Andreas Störko, is a new yardstick for multi-purpose rooms and informal communications areas.

At the heart of Aline lies the skid-base chair with a design that is both coherent and innovative.

The seat and backrest are made of strong plastic and the chair has a stylish, bright chromium-plated round steel rod skid base. The result is a piece of furniture that is lightweight, stable and with materials reduced to the max. The flexible design and colour-matched high-efficiency fabric covering, combined with the holes to keep your body cool at the back, make sitting on the chair both relaxing and comfortable.

The masterstroke: the seat and backrest, available in black, grey and white, are based on the interlocking rails principle. This feature ensures extremely compact, safe and form-fit stacking that is kind to seat covers. Due to the integrated design with just two materials, Aline is ideal for restaurants, conference areas, lecture theatres, waiting rooms, customer-service areas or homes.

Aline skid-base chair

Design: Andreas Störko

Model 230/1
white fabric, bright
chromium-plated frame

The chair's light weight allows easy form-fit stacking of up to 15 chairs on top of one another and even up to 25 with a stacking trolley. And only 20 mm ($\frac{3}{4}$ ") per chair is added to the height of the stack. The edge to the backrest acts as a handle, side slots in the seat frame make the chairs easy to pull forward and remove from the stack.

Practical accessories for major events: slot-on clips showing row and seat numbers.

Simplicity itself and available as an accessory for the skid-base chair is the automatic shot-blasted, matt chromium-plated, flat-profile steel connector. To use, just open out and insert the next chair – that's all there is to it.

Exclusively for black seat and back frames: The two-tone covers in silver-black and copper-black make it easier to coordinate different material and colour interior design concepts.
